## DUGOMRULLI HISTORY

The past, present and future of materials handling

From its first facilities, established back in 1938, to the current 17,000-square-meters productive area not far from Bologna airport the DugomRulli history has been characterized by continuous growth.

DugomRulli started its activities in 1938 producing tools and equipment for cold forming of sheet metal.

DugomRulli in 1948 began the production of conveyor components, before chains, then rollers.

Since then, for three generations, DugomRulli took care of all customer's needs offering the best solutions available in the roller conveyors market.

This leading position is now ensured by the full automation of its welding and assembling production lines, by one of the most versatile and best-performing ranges of handling products and by a UNI EN ISO 9001:2008 certified quality system.

DugomRulli is now synonymous with productivity, efficiency and technological skills in material handling.
